PDR-II/150-ST01

Technical Requirements

1. Appearance shall be clean without crash, break and scratch. Terminal shall be tight and label shall be clear.
2. Lead is black 1.5mm² weave silica gel. Stand shall withstand high temperature and could resist burning.
3. Insulation Resistance: Normal state: not less than 50 megohm.
   Damp state: not less than 20 megohm.
4. Elect. Intensity: Withstand AC 1500V/1min between lead and housing, 60Hz without break and flashover.
5. Output power: output power is 1500W$^{+5}_{-10}$%, when wind speed is3m/s.
6. In abnormal operating state, such as fan stops working, the resumed thermal protector's operating temperature shall be 90±5℃.
7. If resumed thermal protector loses efficacy, the cut temperature of one-off fuse is 144±5℃.
